KPI Report Engine

Daily and hourly network reports for four regions, built and mailed by code

THE PROBLEM

Four regional network teams copied figures from thousands of CSV files into their KPI reports by hand, every day.

WHAT I BUILT

A Python and SQL engine that reads the network's exports, applies the team's KPI formulas and mails each region its report, daily and hourly.

THE RESULT

About 85% less manual reporting work. Every team has its report in the morning.

85%
less manual reporting work

4
regional teams with their report every morning, without anyone building it

2G–5G
every technology in one report; 5G joined in 2025

TOOLS

Python · pandas · SQL · Plotly · python-pptx · Excel · NetAct exports
