NetAct XML Loader

The day's network dumps in the engineers' database in 20 minutes, not 6 hours

THE PROBLEM

Loading the day's network configuration dumps into the engineers' database took about six hours.

WHAT I BUILT

A Python tool that reads the XML dumps once, fills the same database tables and compares every cell with the old import.

THE RESULT

About 20 minutes instead of about six hours, used by the team every day.

20 min
to fill the database from the day's dumps, where the old import took about 6 hours

1,000+
table types filled by one tool, from 2G to 5G

100%
of cells compared with the old tool's database on each run

TOOLS

Python · lxml · pandas · pyodbc · MS Access · Jet SQL · Excel · NetAct XML
