Saudi Card Spending

3.9 million daily figures, checked against SAMA, in one bilingual dashboard

THE PROBLEM

SAMA publishes card spending in three separate forms. No single place showed what was spent, where and on what, day by day.

WHAT I BUILT

A pipeline that collects all of it and checks it week by week against SAMA's own reports, with a bilingual dashboard on top.

THE RESULT

3.9 million daily figures. 9,816 of 9,836 weekly city figures equal SAMA's reports.

9,816
of 9,836 weekly city figures equal SAMA's PDFs within rounding

1 week
holds all 20 misses: 24 to 30 Mar 2024, where the PDF is short by about half of Saturday 30 March

5.3%
growth in card spending, the 52 weeks to 17 October 2026: 736.7 billion riyals

781.6M
riyals on food and beverages on Friday 28 Feb 2025, the day before Ramadan: the highest day of any activity in 1,021 days

TOOLS

Python · pandas · requests · SQL · DuckDB · Power BI · DAX · JavaScript · SVG
